Subject: assistance

Dear Dr. Hartmann:

I desperately need assistance in finding out information on people that supposedly handled a bichon frise puppy that I purchased on sept. 19, 1997 from Lauglin Kennels here in Oxford, Ma. She has had numerous health problems from the day I purchased her. She had a yellow discharge from her eyes and nose and 3 days later ended up in the hospital with a high fever, dehydration, bloody diarrhea and a wheezy cough. Throughout her life she has had obsessive drinking when stressed problems, fear anxiety, fear aggression, OCD grooming her 4 feet till they were bald and full of sores. Then a year ago so was diagnosed with small intestinal bacterial overgrowth and she has had intermittent urinary tract problems including calcium oxylate crystals.

Then suddenly last November she had 5 severe seizure's in one day at 6 years old which makes her too old to suddenly develop severe epilepsy and my Vet is concerned that somewhere along the long of people that she transferred to she was either exposed to or had distemper which would account for her bizarre problems all her life and the brain damage could be at the core of her sudden seizure disorder. We really need to know all inspection reports at any of the facilities she was at before I purchased her and need to know if there was any distemper problems at any of these facilities.

The information I have on her tells me that her breeder was Leroy J and Bonny Sperlich USDA #46-A-0245 of Stickney, S.D. and she was then transferred from the breeder to:

Kathy Bauck of Rt. 3 Box 280 New York Mills, MN 56567

I am contacting the different state authorities where she supposedly spent the first 11 weeks of her life and I need to know anything that was found at any of these locations while she was there. This is very important for her well being and the treatment of her seizure disorder in the future.

Please search this info out for me and give me any information that you can come up with to help my Aimee.

Sincerely,
RoseMarie Laramee
